

Best Deck recommendation on live stock system and collection system built by Marthinus Hendrik Senekal

The implementation of the stock and collection system has significantly improved the way we manage and monitor inventory. The stock system allows us to keep accurate track of stock levels in real time, reducing discrepancies and improving stock control and also helps us when placing new orders for containers.

It also enables us to reserve stock specifically for clients, ensuring that allocated materials are secured and readily available when required. This has improved customer service, planning, and operational efficiency.

In addition, the collection system has strengthened accountability and record-keeping. By allowing us to capture photographs as proof of collection, we are able to maintain clear evidence of the exact items collected by clients and their condition at the time of handover. This feature minimizes disputes, improves transparency, and provides a reliable reference for both the company and clients.

Overall, the systems have contributed positively to stock accuracy, client satisfaction, operational organization, and accountability within the business.

Kind regards
Stuart Martin
